

SOFTWARE DEVELOPER INTERN ASPIRANT

Motivated **Computer Science undergraduate** (3rd Year, REVA University, Bangalore) actively seeking a **Software Development or Web Development internship**. Proficient in **C, C++, Data Structures & Algorithms, and SQL** with hands-on project experience in **HTML5, CSS3, and JavaScript**. Currently expanding skills in **Python** and **Machine Learning**. Strong problem-solving mindset with a passion for building efficient, real-world applications.

TECHNICAL SKILLS

Languages	: C, C++, JavaScript, Python (Basics)
Web Dev	: HTML5, CSS3, Responsive Web Design, DOM Manipulation
Core CS	: Data Structures & Algorithms, OOP (C++), STL, DBMS
Database	: SQL, MySQL (CRUD Operations, Joins, Queries)
ML / AI	: Machine Learning Fundamentals, Supervised Learning (Coursework)
Dev Tools	: Git, GitHub, VS Code

EXPERIENCE

DSA Problem Solving — Striver's A2Z Sheet

Self-Learning

- Solving **Data Structures & Algorithms** problems covering arrays, linked lists, stacks, queues, and trees using **C++** with brute-force to optimal approach analysis
- Developing strong **algorithmic thinking** and **time complexity** analysis skills essential for technical interviews

Machine Learning — Currently Learning (This Semester)

Self-Learning

- Currently studying **Machine Learning** fundamentals as part of coursework, exploring supervised learning, regression, and classification concepts
- Building foundational understanding of **ML concepts** including model training, evaluation, and basic data preprocessing techniques

EDUCATION

REVA University

Bachelor of Technology — Computer Science & Engineering

Bangalore, Karnataka

2024 – 2028 (Expected)

PROJECTS

Bank Management System

C, File Handling

- Developed a **console-based banking application** in C implementing account creation, deposit, withdrawal, balance inquiry, and deletion using **modular functions** and menu-driven CLI
- Implemented **persistent data storage** using file handling (`fread/fwrite`) to retain and retrieve customer records across multiple sessions without a database
- Applied **structured programming** principles including function decomposition and input validation to ensure reliability and clean code organization

Amazon Clone — E-Commerce Frontend

HTML5, CSS3

- Designed a **pixel-accurate clone** of Amazon's homepage replicating navbar, hero banner, product grid, and footer using **semantic HTML5** and **CSS3 Flexbox** layout techniques
- Strengthened understanding of **real-world UI architecture**, component-based design, and web page structure through hands-on development

Personal Portfolio Website

HTML5, CSS3

- Built a **fully structured multi-section portfolio** from scratch with Navbar, Hero, Skills, Projects, Achievements, and Resume sections using **HTML5** and **CSS3 Flexbox**
- Applied **visual hierarchy** and layout principles to create a professional, organized, and consistent user interface showcasing academic and technical profile

RELEVANT COURSEWORK

- Data Structures & Algorithms | Object-Oriented Programming | Database Management Systems
- Machine Learning (Online Course) | Computer Networks | Operating Systems
